## Saw Mill River and Hudson River Stakeholder Report

THE EARTH IS WHAT WE ALL HAVE IN COMMON - WENDELL BERRY

## **SUMMER APPROACHING**

The summer season is quickly approaching and I have already witnessed so many people enjoying the local waterways here in Yonkers. I have seen family and friends meeting under shady trees in Van Der Donck park after school counting the fish they could see. I've seen high schoolers building forts from various driftwood at the beach in Habirshaw Park. As the weather becomes warmer/nicer, more and more community members begin enjoying the spaces along rivers. These interactions with local waterways alone supports the importance of informing community members about what happens to these waterways during rain storms and how their water quality declines rapidly under these conditions. Using the <u>Sewage Pollution Right to Know alert system</u> from DEC can help keep our community safe during these events. If you have yet to sign up, I encourage you to do so. If you are signed up, encourage your friends, family, neighbors, and coworkers to do so. These systems help protect the health of those we care about.

(The Distinguished River): A section of our newsletter dedicated to the great ever changing rivers

Most days not impacted by wet weather events, the Hudson River has water quality consistent with a river that can be safely used recreationally.

On June 29 - partner groups will welcome community members to enjoy the Hudson River with free kayaking, seine fishing, arts & crafts, and more as a way to celebrate and welcome the summer.

Check out the link for more information.

**(DATA):** 

Most Probable Number (MPN) of Colony Forming Enterococcus Bacteria per 100ml sample. EPA recommends public notification and possible temporary beach closure for single Enterococcus samples above 60 cells/100ml. Samples testing above this threshold appear in red on the Riverkeeper website, while those below it appear in green. To avoid exposure to chronic contamination, the geometric mean, a weighted 30-day average, should not exceed 30 cells/100ml. To avoid exposure to occasional high levels of contamination, no more than 10% of samples should exceed 110 cells/100ml.

Watershed	River Mile	Site ID	Site Name	Sample Date	Sampling Time	MPN*
Hudson	-	SMR-HR-20	(YONKERS) JFK Marina Boat Launch	6/13/24	9:01 A	<10
